

Current "Conspiracy Theories" - or Practices?

According to reputedly reliable sources (Federal German Intelligence) a (nuclear) terror attack was to have taken place in Houston, Texas on Dec. 27th 2004. Credible traces were to point to Islamist terrorists, and this would have been used as a pretext for an attack on Iran. But things turned out quite differently!

There are many indications that the aspirants to world hegemony are now seeking to establish themselves politically and militarily further eastwards. On 27th December (the day after the tsunami catastrophe) India is reported to have refused to join the "Club of Four" planned by the US government, which, according to the Australian Joe Vialls, "would have effectively pulled this Asian nuclear power out of its new coalition with Russia, China and Brazil". Further: "On 28th Dec. the Indian government politely warned the American military to stay clear of Indian sovereign territory. And on 29th Dec. the India Daily publicly questioned in its editorial the nature of the [tsunami] event: 'Was this a showdown by a country to show the region what havoc can be created? Given the level of devastation and given the fact India is a regional power in S.Asia, [the Indian Navy] has an Obligation to investigate and teil the world what they found.'"

Vialls Claims that there are many demonstrable contradictions in the official tsunami story. And he focusses on a central question: was the tsunami a natural occurrence or a man-made catastrophe? (It is well known that, for decades, earthquakes have been artificially induced through the use of a variety of rmethods.)

Vialls informs us that on 26th December he noted precisely the announcements made by the Jakarta Geophysical Observatory. The first informed of a quake of 6.4 intensity on the Richter Scale occurring within the region of the northern islands of Indonesia. The epicentre was said to be 155 miles south-west of Aceh Province. Vialls says the American NOAA had later announced an epicentre in the north-west of Aceh with a strength of 8.0. The NOAA had continually raised the measurement, to 8.5, then 8.9, and finally 9.0. He claims the NOAA had thus invented a seismic wave with a flexible maximum. The true epicentre, he says, had been correctly recorded by dozens of Indonesian and Indian seismographs. As the seismic graphs had shown a concentration of T' (pressure) waves it is in Vialls' opinion almost certain that the cause was an Underground or underwater detonation. The graphs resembled those of the gigantic Underground explosions of atomic bombs in the Nevada desert. Vialls thinks it is possible that a multimegaton atomic bomb had been placed at the bottom of the Sumatra Trench.

In view of these divergent indications one might also suspect that the "quake"'s epicentre was not a point but was extended in a north-south direction. Vialls' assertion that there had been warnings about after-shocks but that none had actually occurred seems to us highly questionable: According to an official chart there were in the region around 30 after-shocks with intensities of 5.5 to 7.1 in the period up to 6.1.2005 alone.

Invasion by US Troops?

More interesting is what Vialls reports on movements of US troops (bringing aid to the area). On the morning of 27.12.2004 the Australian media reported that the worst affected region was Sri Lanka, the island at the southern tip of India which is, like Australia, a meinber of the British Commonwealth. Immediately, efforts were made to seek out where the necessary help could be found. But the Australian head of government 'Little Johnny' Howard had, in secret-service style, prepared four RAAF Hercules transport aircraft for take-off, loaded with aid equipment. "The waiting-time was short, and after a high-flying reconnaissance aircraft had confirmed that the airstrip near Medan in East Sumatra was clear, the four planes, loaded with troops, weapons and other equipment, took off for the *Invasion* of Sumatra (the area that was actually the worst affected), just to the south of the devastated province of Aceh." Aceh could in future become a Guantanamo Bay of Indonesia, with hundreds of heavily armed Australians and Americans roaming the area.

From Hong Kong and Guam the USS Abraham Lincoln and the USS Bonhomme Richard, a carrier for amphibious assault craft, were dispatched cram-full of weapons to the disaster area. "In order to safeguard the parts under water they are escorted by the nuclear submarine USS Pasadena, while the US Coast Guard cutter *Monro*, designed for heavy seas, is accompanying them, presumably to deal with the Asian customs authorities." A general staff engineer said of this undertaking: "The naval Support group has been preparing for a humanitarian mission of this kind for a year (sic!) and is ideally equipped for the present task." The USS Abraham Lincoln sailed into the Indian Ocean with 70 fighter-bombers and 2000 marines on board (instead of the usual 500). According to Vialls, in the course of this Operation altogether 3500 heavily armed US marines landed in the tiny province of Aceh. In the first few days of the New Ycar "an Australian cameraman mistakenly filmed! a number of these heavily armed US marines äs they were combing through a devastated Indonesian military barracks for retrievable weapons."

An underwater detonation is not a new idea, says Vialls. More than 30 years ago the superpowers already had plans to wipe out each other's coastal cities by such means.¹ "The wave from an atomic underwater explosion is relatively 'clean', enabling the attacker to take over the land.....with little effort.If everything goes according to plan, Indonesia, Sri Lanka and India will be dangling on the hook of the International Monetary Fund and the World Bank for a further 30 years or more."

¹ The 'New Zealand Herald carried a report on an experimental bomb for the creation of tidal waves, which had been tested off the New Zealand coast during the 2nd World War, in 1941.

It seems, therefore, that the tsunami catastrophe has been cleverly used as an opportunity to gain a military foothold in the affected areas. The impression remains also, that the disaster was not entirely unexpected.

Tsunami and the new 'E'-Weapons

A Report on a Startling Series of Articles in the "India Daily" - by *Tobias Saiander, Historian*

Four weeks have passed since the terrible Tsunami tidal wave claimed around 200,000 lives - and the big media corporations have already withdrawn their reporters from the scene of the disaster. Bush's war threat against Iran, the V/EF and the 60th Anniversary of the liberation of Auschwitz by the Red Army now fill the headlines, at least in the mainstream media of the West. A different picture presents itself if we consult mainstream products from the Far East Here one is most struck by the report in the English-Language online version of the "India Daily". For some weeks it has been publishing articles relating to the Tsunami catastrophe, which have to do with the most modern weapons technology. The reader accustomed to the bland uniformity of the media in the West is somewhat baffled by what he meets here, as weapons Systems are mentioned which are far from being a theme of discussion here. We are told of weapons that allegedly influence human thoughts, alter the climate and trigger earthquakes and tidal waves.

Weapons that can alter the mental state of human beings and unleash natural catastrophes - is this the Brave New World of *Aldous Huxley*? Or science fiction in the Indian style? Not if one recalls publications like "Code Name Artichoke", dealing with secret CIA experiments in thought control conducted with the help of Nazi medical experts. Or if one has looked at the many documents that have been declassified - i.e. made available to the public - and are meticulously listed on the homepage www.wanttoknow.info of the former translator from Indonesian for the US administration *Fred Burks* (see also the article in the "Washington Post" of Dec. 9th 2004 by *Michael Dobbs* - "Interpreter says no to secrecy"). It is understandable that very few people should want to take up these subjects. After all, is life not easier to live and is it not less burdensome if we remain unaware of the horrifying capabilities of the latest weapons technology? And yet: Does the ostrich have an easier life, just because he sticks his head in the sand? Is it not better to face the facts even if they burden one inwardly? Maybe something could then be done to put a stop to developments that treat human life with contempt.

Let us recall briefly the 'Manhattan Project'. In *Los Alamos*. Who at that time, in the 40's of the 20th Century, could have imagined that it would be possible, out of something inconceivably small that the eye cannot see, to unleash by means of fission (splitting) a light brighter than a thousand suns and an all-destructive radiation, heat and power? The atomic bomb. Thought out in theory, developed in practice and tested on innocent civilians. The result in *Hiroshima* and *Nagasaki* is well-known: hundreds of thousands of people killed, unspeakable suffering - and this, despite the fact that the outcome of the war was already certain. A gigantic experiment on human beings. And the» the outrage of people throughout the world: the "Ban the Bomb" movement against the use of atomic weapons. Only a precise knowledge of the facts, a willingness to grapple with the unbearable, makes a counter-movement possible.

An Earthquake Experiment gets out of Control? So what did special correspondent *Balaji Reddy* write in the "India Daily" of 29th December 2004? Under the heading: "Human Hand behind earthquake and Tsunami? It is time for Indian Navy to investigate", the reporter asks whether the Tsunami catastrophe could have been an experiment to generate earthquakes, which got out of control. He then says it is a well-known fact that many countries are carrying out experiments to control the weather, to direct the movements of the tectonic plates and to use electromagnetic waves for the purpose of military development. He points out that many researchers all around the globe were surprised that the tsunami occurred in South Asia, as it has never done so before. Also the strength of the quake, for example on the Nicobar Islands, was remarkable, and the extent of the destruction there suggests a quake of over 10 on the Richter Scale. And so *Balaji Reddy* asks the question: Was this a demonstration by a country with the aim of showing the region the kind of damage that can be done? And his conclusion is this: As India is a regional power in South Asia, the Indian Navy has the duty to investigate the circumstances more precisely and to communicate its findings to the world.

Who knew what when? On Jan 3rd. 2005, in the same newspaper, special correspondent *Sudhir Chadda* points out that most of the governments of the countries affected by the Tsunami had seen the catastrophe coming, but had not reacted. For example, the Indian Government had received the message shortly after the quake, that their naval base on the Nicobars had been inundated. The governments of Thailand, Sri Lanka and the Maldives had very soon become aware of the approaching catastrophe, but had not evacuated a single person. The conclusion here too: the governments must have known of experiments of a certain country or secret Service or Corporation. But they had obviously received instructions not to react, because it was a controlled experiment. Or they had been told to say nothing.

HAARP and the Ionosphere Three weeks later, on 24th January, an unnamed member of the editorial team of the "India Daily" took up the theme again, this time rather more cautiously, but again with interesting information. Under the heading "India is weary about using earth's atmosphere for military purpose especially HAARP and their impacts in South Asia", the author states that there are no direct indications that the tsunami wave was triggered deliberately, but

that Tsunamis are not the only disaster that can afflict South Asia. And then the following statement is made in the most matter-of-fact way: At the present time more than a dozen countries are working at over 100 projects to alter the weather, mostly to get more water to drought areas. But in addition to this the USA, Russia, China, Japan, the EU and India are carrying out projects that have been made known publicly, whose purpose is to find ways of using the weather and climate to defeat an enemy. Then the HAARP project of the US Air Force and Navy is mentioned. The abbreviation stands for "High Frequency Active Auroral Research Program"; the project is based, the author tells us, in Gakona, Alaska, and has the purpose of understanding, simulating and controlling ionospheric processes, so that communication and surveillance systems can be altered, that is to say: put out of action. The waves generated have the purpose of communicating with submerged U-boats, but also influence the ionosphere, which again has a potential military application. As the effects of these experiments are unknown and South Asia has very few early warning systems, this is, so the author concludes, all the more dangerous.

Triggering Heart Attacks and Stopping Rapists In a second article on the same day, Jan. 24th, another unnamed member of the editorial team draws a connection between the HAARP programme and the control of human thinking and also of the sense of physical well-being. Under the heading "Controlling the ion characteristics in the atmosphere enables controlling the human mind and body", the author points out that several countries, particularly the USA, Russia, China, Japan, the EU and even India are engaged in developing weapons that can influence us human beings physically and mentally. The research, he continues, is top-secret, but one is forced to conclude that it is possible by such means to undermine the morale of the enemy in wartime, while even heart attacks can be triggered off in large groups of people. But in addition, the radiation projected can be used as an anti-ballistic shield, through shutting off the electronic systems of approaching missiles. Future weapons, the article concludes, could consist of ion-changing devices. By this means rapists could be put to flight, thieves made lethargic and terrorists or murderers mentally neutralized.

Mysterious After-Shocks among the Andaman Islands. In a further article of the same newspaper of 24th Jan. yet another unnamed member of the editorial team reports that in the region of the *Andaman* and *Nicobar* Islands strange movements of the earth were still taking place. The animals also reacted similarly to the way they had done before the outbreak of the tsunami tidal wave. The author says that since the catastrophe the seismologists had registered 121 after-shocks from 5.2 to 6.2 on the Richter Scale, but had not been able to find any of the patterns typical of after-shocks. A number of experts, he says, are of the opinion that someone was experimenting down there with the tectonic plates. It looked as though someone were controlling the after-shocks. It is a known fact that certain countries are engaged in research into how one might be able to trigger earthquakes artificially. He added that the native inhabitants had reported various peculiar light phenomena and disturbance of radio frequencies.

A Ban on "E" - Weapons On the following day, Jan. 25th, *Priya Sen*, special correspondent of the "India Daily", stated that India is now relying for her defence on low-flying 'stealth cruise missiles'. The reason for this is that many countries are using electromagnetic waves and laser beams to generate billions of watts of energy in the ionosphere with the aim of destroying by means of heat the entire electronic system of approaching missiles. Thus, Ms Sen continues, the Indian missile experts had realized all too well that ballistic missiles have become useless since most countries can manipulate the ionosphere in order to destroy them.

One wonders when the new weapons systems, which are being discussed quite openly in India, will also become a theme for discussion in our western European mainstream media. People have a sufficiently good idea of what A, B and C-weapons are, and these weapons have been banned by international treaty. When will the public be informed of the new "E" - weapons ("E" for electromagnetic or earthquake-generating weapons)? And when will we citizens of this planet forbid this latest perversion of the human inventive capacity?
